

55-year old male “Prolonged PQ” and broad QRS

Dr. Olli Arola – Tampere - Finland

In 2000 mitral valve prosthesis for mitral prolapse +
regurgitation (normal ECG apart from LVH)

Now sudden onset of palpitations

Blood pressure 110/70

Normal LV function, normal LV diameters post-arrhythmia

Well-functioning valve prosthesis

Ventricular, Atrial Rate: 103 bpm
PR, QRS: 174 ms
QT, QTc: 408 ms
PRT Axis: -30 °

*** Poor data quality, interpretation may be adversely affected
Wide QRS rhythm
Left axis deviation
Left ventricular hypertrophy with QRS widening and repolarization abnormality
Inferior infarct, age undetermined
Abnormal ECG
No previous ECGs available

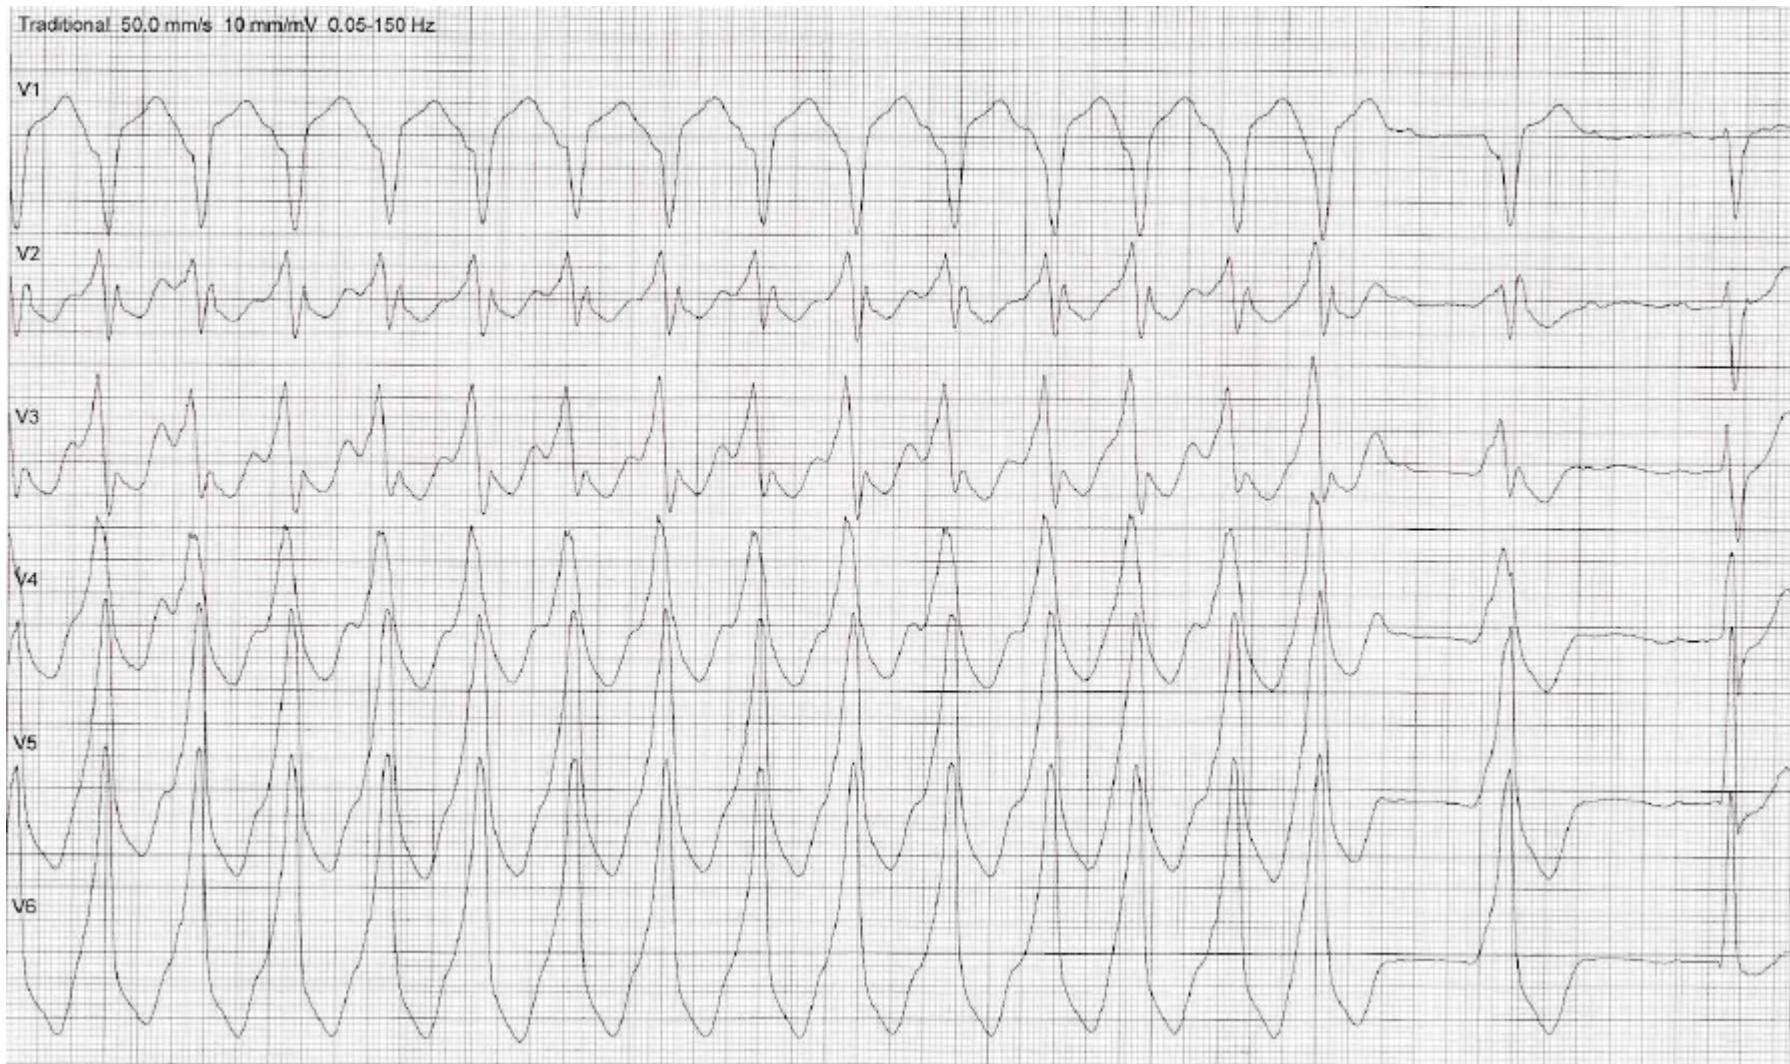

50 mm/sec!

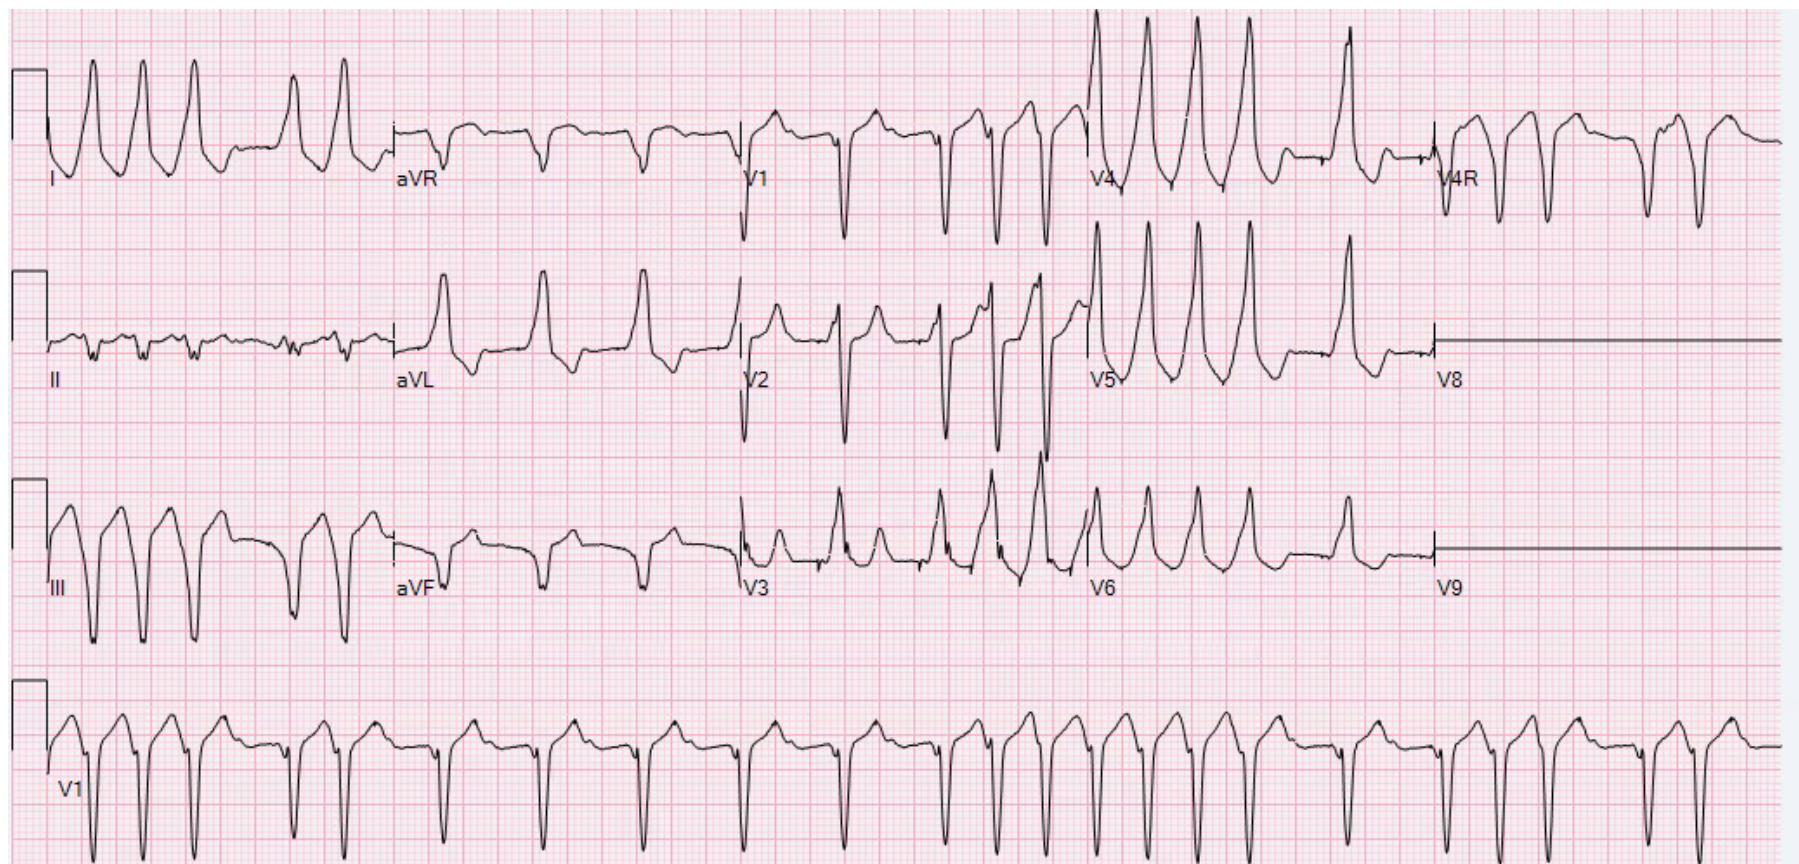

Heart rate:	185 bpm
PR interval:	108 ms
QRS time:	94 ms
QT/QTcB int.:	280 / 492 ms
QTcF int.:	408 ms
P-R-T axes:	115 / 11 / -61°

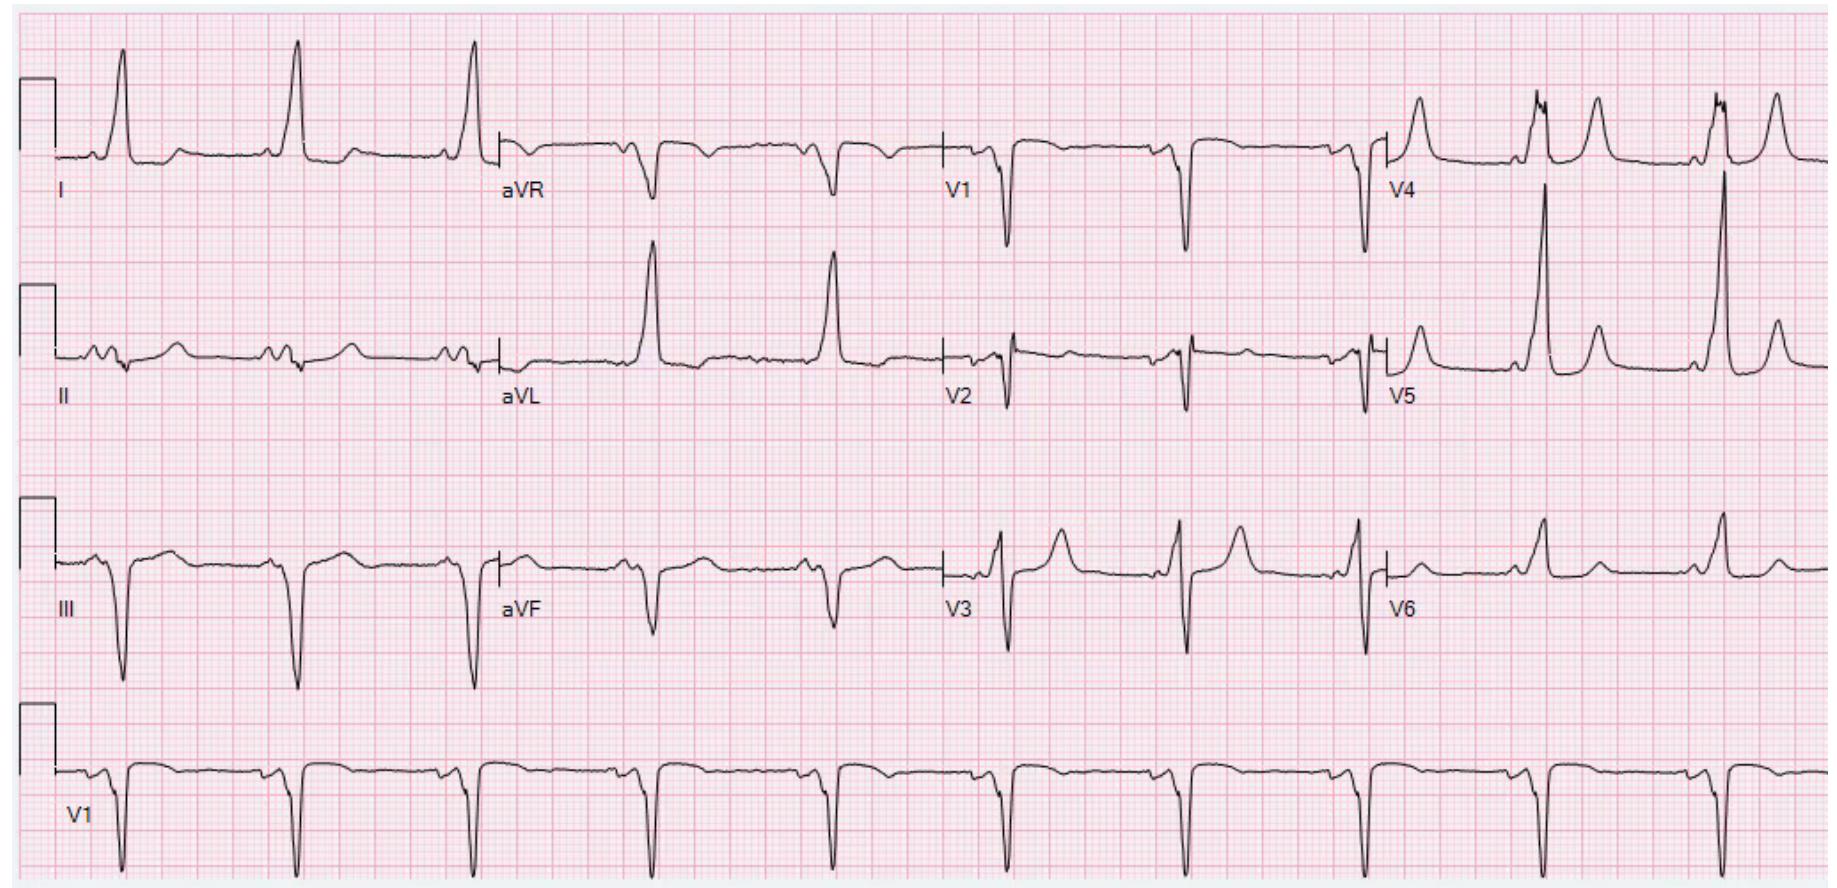

This print is for visual inspection only. Calibrated monitor needed for exact measurements.

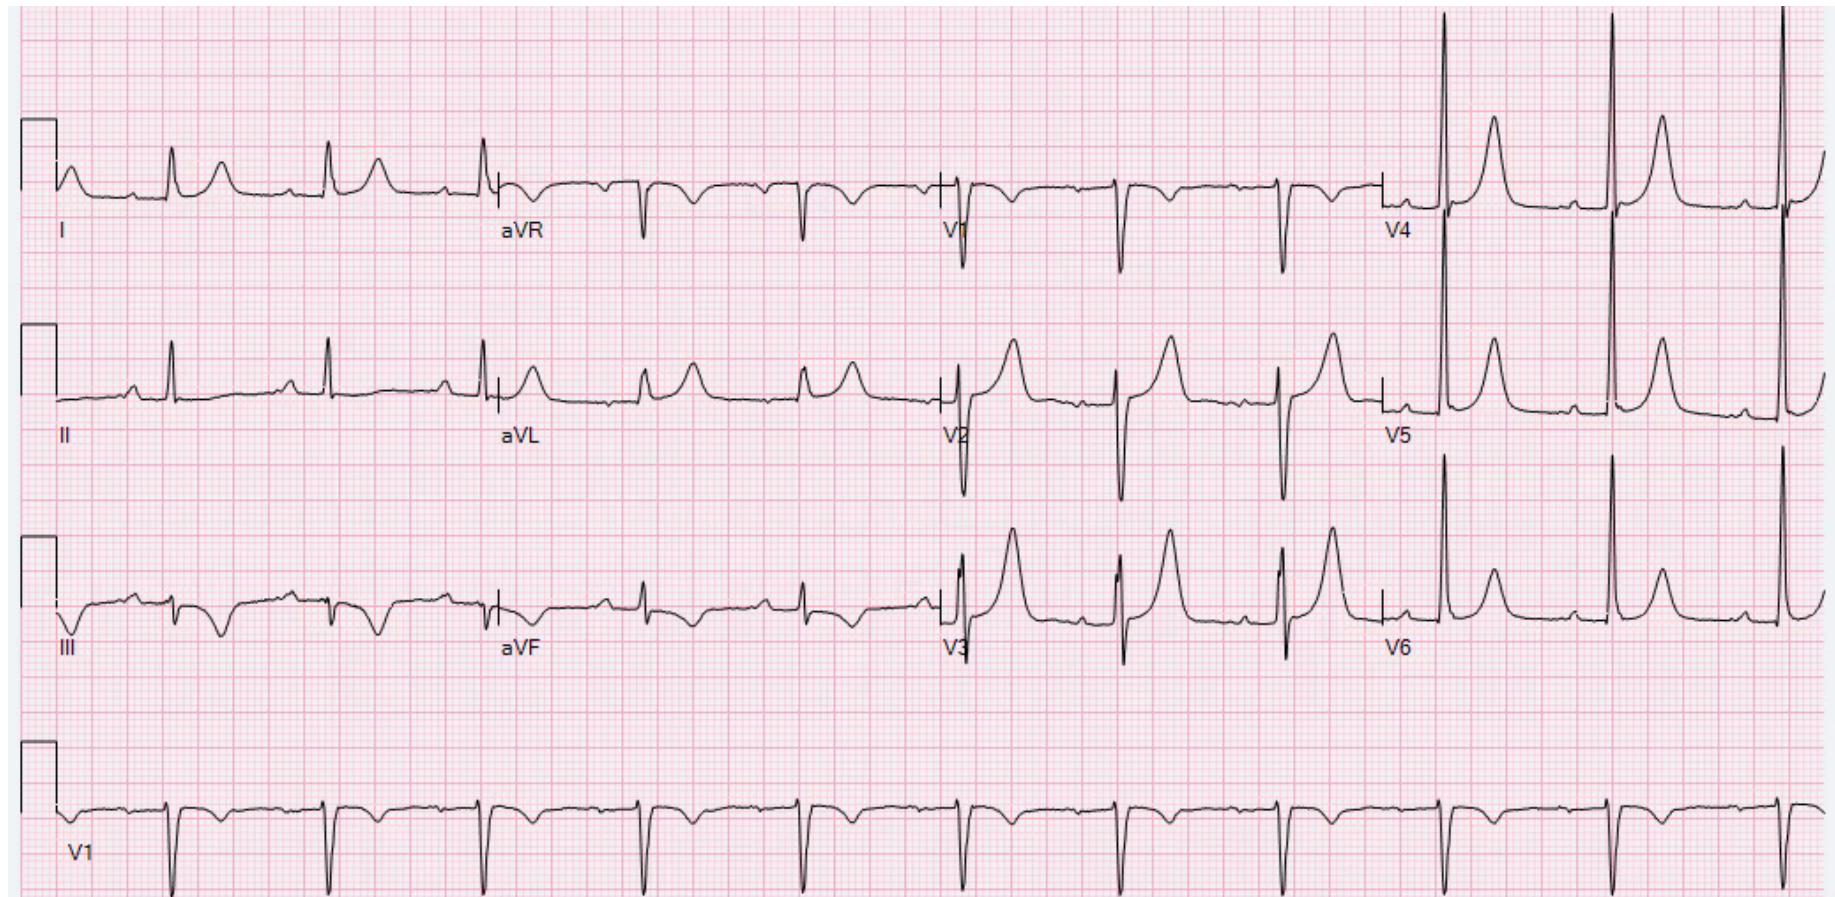

50 mm/sec!

Post-ablation

Electrophysiology study

- VA block
- Antegrade conduction only via accessory pathway
- AP-ANTE-ERP 600-320, IAP 320 via accessory pathway
- Isoprenaline infusion:
 - Conduction also via AV node
 - Acceleration of conduction via accessory pathway: antegrade IAP <230, AP-ANTE-ERP 500-200
- Isthmus ablation successful
- Accessory pathway: right, region of slow pathways of the AV node (in LAO 40° projection: 4-5 o'clock; "posteroseptal")
- Ablation of accessory pathway successful
