

# Hipertrofias segmentarias

El electrocardiograma detecta las hypertrofias fisiologicas y patologica excentricas  
No reconoce las hypertrofias concentricas ( si el ecocardiograma).

Las sobrecargas sistolicas con mutaciones en la cadena biologica miocardica que forma las hypertrofias en el miocardio tampoco las identifica,

Nosotros reconocemos 5 patrones electocardiograficos que expresan las hypertrofias del ventriculo izquierdo

Figura 1;hypertrofia basal expresado por onda S profunda en DIII y onda R alta en AVL.

Figura 2 ; Hypertrofia lateral izquierda; onda R alta en DI , onda S profunda en AVR , y V1.

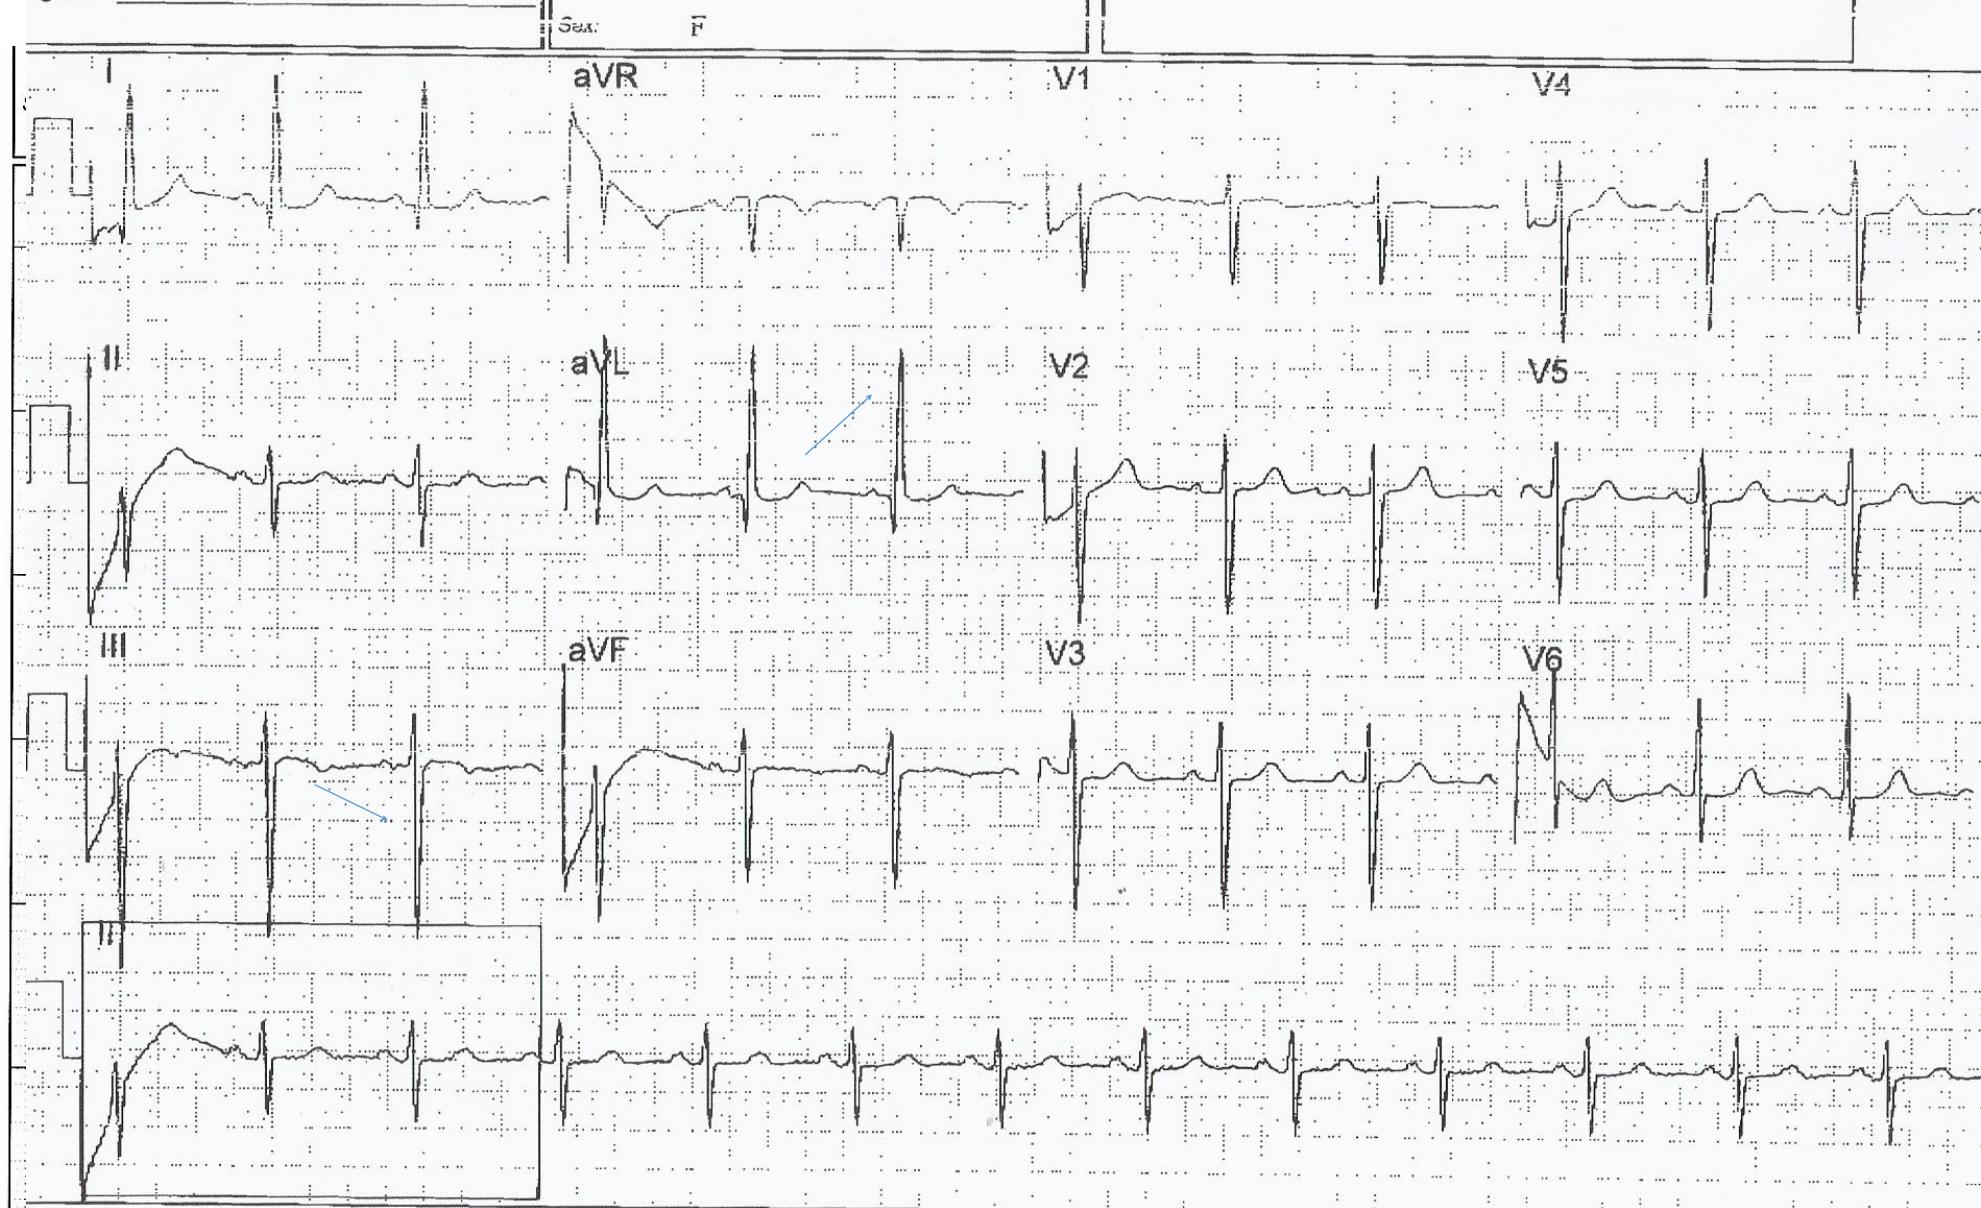

Figura 3 ; Hypertrofia apical , R altas en v4,v5,v6.

Figura 4 ; Hypertrofia posteroseptales ,ondas S profundasv2 ,v3 ,v4.

Figura 5 ; hypertrofias anteroseptales superior q/R en v2 .

Figura 6 hypertrofias del todo el septo anterolateral R altas en v2,v3 ,v4.

En estos slide presentamos unicamente las hypertrofia aislada, pero en su gran mayoria presentan hypertrofias de segmentaria muliple
